I am writing to apply for the Product Designer (UX/UI) role at Nulegal GmbH. The idea of building an AI platform that simplifies legal and regulatory processes for companies is genuinely interesting, and I appreciate that you are looking for someone who can own the entire design area from day one.

My background is in full-stack engineering, but I have always worked closely with design. Through building web applications, I have developed a strong sense for UI structure, component systems, and what makes an interface feel intuitive. I have used Figma extensively to design layouts, create reusable components, and collaborate with engineering teams on implementation.

One area that particularly interests me is maintaining and growing a design system. In my previous work, I have built frontend architectures using component libraries like Material UI and Tailwind CSS, which taught me how to think in terms of reusable tokens, consistent patterns, and scalable UI structures. I understand the importance of keeping design and engineering aligned.

I am comfortable working directly with users to gather feedback and turn insights into product improvements. I also use AI tools regularly in my workflow and am open to rethinking processes when there is a better way to do things. Working in a small, ambitious team where I can take real ownership is exactly the kind of environment I thrive in.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the nu:legal product and team.

Sincerely,

Md Shahanur Islam Shagor
