I am writing to apply for the Consultant AI Transformation / AI Engineer role at rwQUANTICAL GmbH. Your focus on helping mid-sized and large enterprises navigate digital and AI transformation aligns with my own experience in building intelligent, production-ready systems that bridge technical depth with practical business outcomes.

Through hands-on project development, I have worked extensively with AI integration and automation. I have built applications that leverage OpenAI APIs for intelligent assistants, Replicate for image processing, and AWS services for scalable deployment. These projects required me to design end-to-end solutions, implement authentication and payment systems, and manage cloud infrastructure on AWS and Google Cloud.

One area that particularly interests me is the technical conception of digital solutions and automation strategies. In my recent work on an AI-powered real estate platform, I was responsible for training multiple AI assistants using GPT models, integrating image processing pipelines, and implementing role-based access control with subscription management. This experience has given me a practical understanding of how AI can be applied to solve real business problems.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my background in AI engineering, full-stack development, and cloud deployment would allow me to contribute meaningfully to your team. I have attached my CV for your review and look forward to the opportunity to discuss how I can support rwQUANTICAL’s clients in their AI transformation journey.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
