I am writing to apply for the Linux Systemadministrator position at SelectLine Group. Your focus on supporting security and building cleaning companies with reliable IT infrastructure aligns with my experience in maintaining stable, secure server environments.

My technical background is centered on Linux system management. I have worked extensively with Ubuntu and Debian servers, handling administration, maintenance, and security. I am comfortable configuring web servers like Nginx and Apache, managing firewalls, and setting up network services including DNS and DHCP. I also have experience supporting Windows clients in mixed-OS environments.

In previous professional roles, I deployed and maintained production applications on Linux servers. This involved setting up Docker containers, configuring Nginx reverse proxies, implementing CI/CD pipelines, and monitoring system health. I also handled hardware setup and troubleshooting for development and production infrastructure.

One area that particularly interests me is infrastructure monitoring and security. I have built a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which tracks availability and latency across multiple endpoints. This project gave me practical experience in keeping systems observable and reliable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team in Wismar.

Sincerely,

Md Shahanur Islam Shagor
