I am writing to apply for the Senior SAP BTP Developer role at MY Humancapital GmbH. The position focuses on developing workflow automation solutions, building backend services with Node.js and CAP, and managing containerized cloud deployments on Kubernetes. These responsibilities closely match the technical work I have been doing in full-stack and cloud-native development.

Through my professional experience as a Web Developer, I have built backend services and RESTful APIs using Node.js and Express, and developed full-stack applications with JavaScript and TypeScript. I have also worked with Docker and Kubernetes for containerization and orchestration, deploying and maintaining cloud-based applications on AWS and Linux servers. This foundation in backend development and cloud infrastructure directly supports the SAP BTP development work described in this role.

One area that particularly interests me is the combination of workflow automation and containerized deployment. In previous projects, I have implemented real-time data processing systems using Socket.IO and built scalable microservice architectures with Docker Compose and Nginx. I have also managed CI/CD pipelines and monitored application health using tools like Prometheus and Grafana. These experiences have given me practical knowledge of building reliable, containerized systems that can operate in production environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in backend development, cloud deployment, and containerized systems can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
