I am writing to apply for the Projektcontroller Automotive position at Bovensiepen Automobile GmbH + Co. KG. Your company's transition from ALPINA to the independent Bovensiepen brand represents a significant transformation, and I understand the importance of having solid financial and operational control during such a phase.

While my background is in software engineering rather than traditional controlling, my work has consistently involved building systems that translate complex data into clear, actionable insights. I have developed real-time monitoring dashboards and KPI reporting tools that help teams make informed decisions quickly. This experience has given me a practical understanding of how to structure data, track budgets, and communicate results to stakeholders who may not share a technical background.

One area that particularly interests me is the Weiterentwicklung von Reporting-Strukturen und KPI-Dashboards. In a recent project, I built a full-stack server health monitoring system that streamed live metrics to the browser using Socket.IO, with role-based access control and Dockerized deployment. This required me to think about what data matters, how to present it clearly, and how to ensure it drives real decisions rather than just filling a screen.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
