I am writing to apply for the Technical Project Manager - IoT & Cloud position at Modern Drive Technology GmbH. Your work as a full-service IoT-Cloud integrator for OEMs and machine producers is directly relevant to my technical background and my interest in connecting customer needs with engineering execution.

What stands out to me is the central role you describe: being the interface between customers and the development team, translating real customer needs into precise technical specifications and user stories. This is a responsibility I have carried in my own work. Through my professional experience as a Web Developer, I have regularly gathered requirements from clients, documented them clearly, and coordinated with engineering teams to ensure structured, on-time delivery. I am comfortable working within agile frameworks and maintaining clear communication across both sides.

Technically, I have a solid understanding of cloud architectures, APIs, and software development workflows. I have worked extensively with AWS, Docker, Nginx, and CI/CD pipelines, and I have built and integrated RESTful APIs for production systems. This technical foundation allows me to assess feasibility, ask the right questions during requirement analysis, and communicate technical constraints to non-technical stakeholders in a way that is both accurate and understandable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in software engineering and client-facing project coordination can contribute to MDT’s continued growth.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
