I am writing to apply for the DevOps & Data Architecture Intern position at Heidi Systems. Your work on digitizing metering, consumption data, and billing workflows for buildings and energy infrastructure is exactly the kind of real-world technical challenge I want to be part of. The opportunity to work on production-relevant systems from day one and help shape the data infrastructure of a fast-growing startup is what I am looking for.

Through hands-on project development, I have built experience with Go and TypeScript, and I am comfortable working with APIs, databases, and data pipelines. I have also worked extensively with DevOps tooling including Docker, Nginx, Linux servers, and CI/CD pipelines. My technical mindset is rooted in building clean, reliable, and scalable systems that solve practical problems.

One area that particularly interests me is real-time monitoring and infrastructure reliability. I built a full-stack server health monitoring dashboard using Node.js, Express, Socket.IO, and Docker that streams live system metrics to the browser. This project involved working with real-time data, scheduling, and deployment infrastructure, which directly connects to the kind of work you are doing with data ingestion, monitoring, and system reliability at Heidi Systems.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to work closely with your founding team on data architecture, backend services, and infrastructure challenges.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
