I am writing to apply for the Werkstudent Software Engineer - IoT & Cloud position at Modern Drive Technology GmbH. Your work as a full-service IoT-Cloud integrator for OEMs and machine producers is impressive, and I appreciate that you offer real product development experience rather than just administrative tasks. The opportunity to contribute to a live IoT platform that connects over 13,000 units is exactly the kind of hands-on environment I am looking for.

Through my professional experience as a Web Developer, I have built modern web frontends using JavaScript and TypeScript, and I have worked extensively with REST APIs. I have used Node.js for backend development and have a solid understanding of how to connect frontend interfaces to backend services. I am comfortable working with Angular and am eager to deepen my skills in it while contributing to your platform.

In previous roles, I have been responsible for implementing new features, participating in code reviews, and maintaining clear documentation. I have used Git for version control across multiple projects and am familiar with cloud platforms like AWS and Google Cloud. I am also comfortable working with Linux servers and Docker, which I understand is relevant for IoT and cloud environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am currently pursuing a Bachelor of Science in Software Engineering, which gives me a strong theoretical foundation to complement my practical development experience. I have attached my CV for your review and would welcome the chance to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
