I am writing to apply for the Software Engineer - IoT & Cloud position at Modern Drive Technology GmbH. Your focus on providing OEMs with a branded digital service platform without requiring them to build their own cloud infrastructure is a practical and valuable approach. The opportunity to contribute to a growing IoT platform serving over 100 customers is what draws me to this role.

My professional experience centers on frontend development with TypeScript and JavaScript, building modern, responsive web applications. I have worked extensively with REST APIs to connect frontend interfaces with backend services and external systems. This directly matches your need for someone who can develop and enhance web frontends and integrate data through APIs.

In previous work, I have been involved in shaping frontend architecture, making decisions about component structure and best practices. I have participated in code reviews and focused on improving code quality and documentation. I have also worked with CI/CD processes and containerized deployments using Docker, which aligns with your DevOps workflow requirements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to the continued development of your IoT platform.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
