I am writing to apply for the Anlagenbuchhalter (m/w/d) Assetmanagement position at MY Humancapital GmbH. While my professional experience is rooted in software engineering, I have consistently applied strong analytical and process-optimization skills to build complex, data-driven systems. I am confident that this structured, solution-oriented approach is directly transferable to the responsibilities of asset lifecycle management and accounting.

In my work as a full-stack developer, I have designed and managed scalable database architectures using MySQL and PostgreSQL, ensuring data integrity and efficient retrieval. This experience has given me a deep appreciation for accurate data management, structured workflows, and the importance of precise documentationâ all of which are central to the Anlagenbuchhalter role. My ability to analyze complex systems and optimize processes would allow me to quickly master the specifics of asset accounting and HGB reporting.

One area that particularly interests me is the challenge of managing and tracking complex asset movements. My background in developing systems with role-based access control and secure transaction handling has prepared me to manage sensitive financial data with the required level of accuracy and security. I am accustomed to working with detailed specifications and ensuring that every component of a system is correctly configured and accounted for.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical skills and structured work ethic can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
