I am writing to apply for the Founders Associate Intern: AI Product Consultant position at qado GmbH. Your approach to building an AI platform for procurement, where autonomous agents run negotiations and extract value from complex enterprise data, is exactly the kind of applied AI work that interests me most.

Through hands-on project development, I have built AI-powered applications that integrate LLM-based assistants into production systems. I worked with OpenAI APIs to train custom AI assistants using domain-specific datasets, integrated Replicate API for image processing, and built real-time features using WebSockets. This experience has given me practical fluency with LLM constraints, prompt engineering, and debugging agent workflows when they fail.

One area that particularly interests me is the customer-facing side of this role. In my work on an AI-powered financial app, I was responsible for understanding how users interact with AI features, translating their needs into technical requirements, and ensuring the system delivered real value. I am comfortable sitting across from customers, making complex AI capabilities understandable, and shaping product decisions based on what I learn.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can take real ownership, work directly with founders, and contribute to building something that matters. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to qado.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
