I am writing to apply for the SVP Banking Operations role at Nymbus. Your focus on rebuilding managed services delivery with agentic AI and scalable architecture is exactly the kind of transformation challenge I want to be part of.

Through my work as a Full-Stack and AI Engineer, I have designed and deployed AI-powered systems that go beyond simple automation. I built an AI-powered financial application using OpenAI, AWS Transcribe, and AWS SES, where AI assistants handle natural language interactions and automate document generation. I also developed an AI-powered real estate platform that integrates Replicate API for image processing and GPT-based assistants for property insights. These projects required me to think about AI not as an add-on, but as the core operating logic of the system.

One area that particularly interests me is designing scalable, secure architectures that can handle real-world constraints. In my professional experience, I have built RESTful APIs, implemented role-based access control, and deployed applications on cloud infrastructure using Docker, Nginx, and CI/CD pipelines. I have also worked on real-time communication systems using WebSockets and Socket.IO, and I am comfortable with the operational discipline required to maintain SLAs and client commitments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
