I am writing to apply for the MANAGER TECHNOLOGY MET position at The Home Depot Canada. Your commitment to using AI technology in the screening process reflects a forward-thinking approach that I find genuinely interesting. I appreciate the emphasis on helping others succeed and guiding customers to the right solutions.

My background is in full-stack development and AI engineering, with professional experience building scalable web applications. I have worked extensively with Laravel and Next.js to deliver production systems that handle authentication, role-based access control, payment integration, and real-time features. I also have hands-on experience with Node.js, React, TypeScript, MySQL, and deploying applications on Linux servers using Docker and Nginx.

In my previous role at Explo-IT, I designed and developed RESTful APIs, optimized database performance through query tuning and caching, and delivered responsive, SEO-friendly interfaces. I also built real-time features using WebSockets and integrated third-party services including payment gateways and cloud storage. One project I developed was a multi-vendor e-commerce ecosystem with Laravel and Flutter, which managed complex role-based workflows, real-time notifications, and logistics coordination.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.
