I am writing to apply for a crew position on your AHTS vessel. While my professional background is in software engineering and autonomous systems, I bring strong technical problem-solving skills, hands-on experience with complex systems, and a proven ability to learn quickly in demanding environments.

My work has involved building and maintaining real-time monitoring systems, deploying applications on Linux servers, and managing Docker-based infrastructure. I am comfortable working with hardware-software integration, sensor systems, and network communication protocols. These skills translate well to technical roles onboard where system reliability and quick troubleshooting are essential.

In previous projects, I have developed real-time server health monitoring dashboards and worked with embedded systems like Raspberry Pi and ESP32. I am familiar with system performance tracking, latency analysis, and maintaining operational stability under load. I approach technical challenges methodically and stay calm under pressure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical background can contribute to your vessel’s operations.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
