I am writing to apply for the Vice President of Customer Growth role at PatientIQ. Your platform's focus on outcomes intelligence and patient-reported data at scale is impressive, and I appreciate the mission to improve patient lives through better data and collaboration.

My background is in software engineering, where I have built and delivered full-stack web applications using Laravel, Next.js, React, and Node.js. I have experience designing RESTful APIs, implementing authentication and role-based access control, and integrating payment gateways. This technical foundation allows me to understand how health technology products function, how customers interact with them, and where expansion opportunities exist.

In my previous work as a Web Developer, I collaborated closely with stakeholders to deliver scalable applications, optimized database performance, and deployed systems on Linux servers with Docker and CI/CD pipelines. I am comfortable working with data-driven approaches and translating technical capabilities into customer value.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
