I am writing to apply for the Steuerberater KI und digitale Zukunft position at Schwertfels Consulting GmbH. Your vision of a tax consultancy that actively integrates digital processes, AI, and automation resonates with my background as a Full-Stack & AI Engineer focused on building practical, intelligent systems.

While my expertise lies in software engineering rather than tax law, I bring strong technical skills that directly support your goal of using modern tools and AI to streamline workflows. Through hands-on project development, I have built AI-powered financial applications that integrate OpenAI assistants, automated data processing, and real-time communication features. These systems were designed to reduce manual effort and improve decision-making, which aligns with your objective of using KI to handle routine tasks.

In previous work, I developed a full-stack AI-powered real estate platform that used role-based authentication, subscription plans, and Stripe payment integration. I also built a real-time server health monitoring dashboard with Socket.IO and Docker, demonstrating my ability to create reliable, automated systems. My experience with Laravel, Next.js, Node.js, and various AI APIs gives me a practical foundation for implementing digital workflows and automation in a professional services environment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my engineering mindset, curiosity about new technologies, and willingness to learn can contribute to your team’s digital transformation. I have attached my CV for your review and would welcome the opportunity to discuss how I can support your goals.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
