I am writing to apply for the Werkstudent in der Hardwareentwicklung position at Kollmorgen Steuerungstechnik GmbH. Your focus on developing innovative control systems for the elevator industry and integrating student engineers into real product development is exactly the kind of environment where I want to grow my practical engineering skills.

Through my research and development work on embedded systems and autonomous platforms, I have gained solid experience with hardware-software integration. I have worked extensively with microcontrollers such as ESP32 and Raspberry Pi, programmed in C++ and Python, and built complete prototype systems from component selection to final testing. This includes soldering test circuits, configuring sensors, and debugging hardware-software interfaces in real time.

One area that particularly interests me is the combination of hands-on prototyping with structured documentation and measurement. In my Wireless Vision-Aid for the Blind project, I designed a low-cost assistive system using YOLOv8n object detection on a Raspberry Pi with an ESP32-CAM module. I was responsible for selecting components, building the prototype, conducting latency and accuracy measurements, and documenting all test results. This experience directly maps to supporting engineers with prototype assembly, testing, and measurement tasks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my hands-on skills, structured approach, and enthusiasm for hardware development to your team. My CV is attached for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
