I am writing to apply for the Team Lead Accounting (m/w/d) position at think about IT GmbH. While my professional background is in software engineering rather than traditional accounting, I bring a strong combination of analytical thinking, process automation experience, and system-building skills that align well with the digitalization and process optimization aspects of this role.

Through my work as a Full-Stack and AI Engineer, I have developed systems that handle complex financial data flows, including an AI-powered financial application that integrates payment processing, automated PDF generation, and real-time data synchronization. This experience has given me a practical understanding of how financial processes can be automated and standardized for efficiency and accuracy.

One area that particularly interests me is the active involvement in digitalizing and automating financial processes mentioned in the job description. I have built real-time monitoring dashboards and server health systems that demonstrate my ability to create transparent, data-driven workflows. My experience with database optimization, API integration, and secure system architecture would support the standardization and reliability goals of the accounting team.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical and analytical skills can contribute to the continued success of think about IT GmbH.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
