I am writing to apply for the Werkstudent Market Research position at INVERS. Your work in shaping shared mobility through data-driven insights and technology is something I find genuinely interesting, and I would like to contribute to your team.

As a Software Engineering student with a strong interest in data analysis and AI, I have built systems that process and analyze data efficiently. Through my project work, I have used Python for data processing, integrated AI models for automation, and worked with databases to extract and structure information. These experiences have given me a practical understanding of how to work with data, identify patterns, and present findings clearly.

What stands out to me about this role is the opportunity to combine analytical thinking with research on shared mobility. I have experience using AI tools for data analysis and automation, which aligns with your interest in applying AI solutions to market research tasks. I am comfortable working with numbers, statistics, and spreadsheets, and I am eager to learn more about the carsharing and mobility market.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
