I am writing to apply for the Senior Java Engineer position at Accso â Accelerated Solutions GmbH. Your approach of combining excellent engineering with practical AI use across the software lifecycle is something I find genuinely compelling.

My work has consistently focused on building well-designed, testable, and efficient software. I have professional experience developing full-stack applications using JavaScript, TypeScript, and frameworks like Next.js and Laravel, and I have integrated AI methods into real-world systems. I am comfortable working across multiple engineering disciplines and delivering production-ready code.

Through my professional experience, I have designed and built RESTful APIs, implemented secure authentication and role-based access control, and optimized database performance. I have also deployed and maintained applications on Linux servers using Docker and Nginx, and set up CI/CD pipelines for reliable delivery. These skills directly support the kind of consulting and software development projects Accso delivers for clients like AXA, BMW, and Deutsche Bahn.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to Accso’s engineering teams.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
