I am writing to apply for the Backend Engineer position at GRID eSports GmbH. The opportunity to build greenfield mission-critical services and shape the technological landscape of an eSports platform aligns well with my background in backend development and systems engineering.

I have professional experience working with Go, REST APIs, and GraphQL, along with a strong foundation in building robust, high-quality systems. I have designed and maintained API contracts with attention to minimal, extendable structures and self-documenting naming. My work includes implementing automated testing, CI/CD pipelines, and containerized deployments using Docker and Kubernetes. I understand the importance of fault-tolerance and complexity trade-offs when designing micro-service architectures.

One area that particularly interests me is building event-driven systems with reliable monitoring and alerting. In previous projects, I have used Socket.IO for real-time data streaming and Prometheus with Grafana for system observability. I am comfortable working with Linux servers, Nginx, and container orchestration to ensure services remain resilient under production load.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my backend engineering experience can contribute to GRID’s engineering team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
