I am writing to apply for the System Engineer Requirements & Systemarchitektur (m/w/d) position at MY Humancapital GmbH. My background in software engineering and systems development has given me a structured approach to managing technical requirements, coordinating interfaces, and delivering complex projects.

Through my professional experience, I have developed strong skills in requirements engineering and system architecture. I have worked on projects where I created and maintained technical specifications, coordinated with internal teams and external partners, and ensured that quality and functional requirements were met throughout the development process. My work has involved managing development activities, monitoring progress, and supporting system integration.

One area that particularly interests me is the challenge of coordinating technical requirements across multiple stakeholders. In previous projects, I have been responsible for defining system architectures, managing interfaces between components, and ensuring that all technical dependencies are clearly documented and communicated. This has given me practical experience in the kind of structured, analytical work that systems engineering requires.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience aligns with your needs.

Sincerely,

Md Shahanur Islam Shagor
