I am writing to apply for the IT Infrastructure and Security Engineer position at Zentso S GmbH. Your work on CloudToolz, a revenue-critical SaaS platform serving clients across multiple regions, is impressive. The opportunity to support global infrastructure and contribute to the Kubernetes migration and observability stack is exactly the kind of hands-on, systems-level work I enjoy.

My background combines infrastructure operations with software development. I have practical experience with Docker, Kubernetes, Grafana, Prometheus, and CI/CD pipelines, which directly maps to your need for someone who can help build and maintain an observability practice and support containerised deployments. I am comfortable writing shell scripts and building small infrastructure applications in Go, JavaScript, and Python, and I have worked extensively with Linux servers, Nginx, and cloud platforms including AWS and Google Cloud.

One area that particularly interests me is the observability stack you are building. I have previously developed a real-time server health monitoring dashboard using Node.js, Socket.IO, and Grafana, which involved streaming live metrics, setting up alerting, and managing Dockerized deployments. This experience gives me a practical foundation for contributing to your Grafana OSS dashboards, alerting, and integration with metrics and logs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my infrastructure and automation skills can support the reliability and security of the CloudToolz platform.

Sincerely,

Md Shahanur Islam Shagor
