I am writing to apply for the Full Stack Engineer position at Clariness. Your work in building a digital platform for clinical trial recruitment and patient engagement is meaningful, and I would welcome the opportunity to contribute to a system that directly impacts healthcare access.

My professional experience centers on full-stack development using Next.js, React, TypeScript, Node.js, and relational databases like MySQL and PostgreSQL. I have designed and maintained features across the entire stack, from frontend UI components to backend APIs and database layers. I focus on writing clean, maintainable code and ensuring performance is considered at every level.

In previous work, I have taken ownership of features from planning through deployment. I have optimized API response times, improved database query performance through indexing and caching, and built responsive, accessible interfaces. I have also worked with Docker for containerized environments, set up CI/CD pipelines, and deployed applications on Linux servers using Nginx. I am comfortable collaborating with designers and product managers in agile workflows and participating in code reviews.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
