I am writing to apply for the Full Stack Engineer (f/m/d) position at Clariness. Your work in building a digital platform for clinical trial recruitment and patient engagement is genuinely interesting to me. The opportunity to contribute to a system that accelerates medical innovation and improves patient access to treatments aligns well with my background in full-stack development.

My professional experience centers on building and maintaining full-stack web applications using Next.js, React, TypeScript, and Node.js. I have worked extensively with relational databases like MySQL and PostgreSQL, and I am comfortable optimizing application performance across APIs, databases, and frontend rendering. I also have hands-on experience with Docker, CI/CD pipelines, and Linux server deployment.

In previous work, I have taken ownership of features from design through deployment. I have built RESTful APIs, implemented authentication and role-based access control, integrated third-party services, and delivered real-time features using WebSockets. I write clean, testable code and participate actively in code reviews and technical discussions. I am used to working in cross-functional teams alongside designers and product managers in agile environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my experience can contribute to Clariness' platform and team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
