I am writing to apply for the Senior Finance Manager:in position at Purefemm. Purefemm is building a D2C subscription brand in the women's health space, and the opportunity to shape the entire finance function of a fast-growing company is exactly the kind of challenge I am looking for.

My background is in full-stack software engineering, but over the past few years I have focused heavily on building financial platforms. I developed an AI-powered financial application using Express, TypeScript, OpenAI, and AWS that handles authentication, data processing, and automated PDF generation. I also built a comprehensive personal finance management platform called Smart Finance using Next.js, Node.js, and Prisma, which includes budgeting, transaction management, subscription tracking, and real-time reporting through Server-Sent Events.

What stands out to me about this role is the emphasis on ownership and building scalable finance processes. Through my project work, I have designed systems that handle subscription metrics, payment integrations with Stripe, and role-based access controls. I am comfortable working with financial data pipelines, integrating accounting systems, and building dashboards that turn numbers into actionable insights. The requirement to work with QuickBooks, Shopify, and Stripe backends is something I can step into quickly given my experience building similar integrations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in building financial systems can contribute to Purefemm's growth.

Sincerely,

Md Shahanur Islam Shagor
