I am writing to apply for the Business Development Manager role at Severin Travel GmbH. Your focus on transforming manual, high-touch processes into scalable, automated systems is exactly the kind of challenge I look for. The idea of building a modular offer engine, integrating AI into daily workflows, and creating measurable efficiency gains aligns directly with how I approach engineering.

My background is in full-stack development and AI integration. I have built production systems that combine backend logic, real-time data pipelines, and AI services. For instance, I developed an AI-powered financial application that uses OpenAI models, AWS services, and automated PDF generation to replace manual workflows. I also built a real-time server monitoring dashboard that streams live metrics using Socket.IO, with a fully Dockerized deployment. These projects required me to think in systems, not just features.

What stands out to me about this role is the emphasis on building a modular offer system, automating the customer journey, and using LLMs and no-code tools to reduce manual effort. I have experience integrating AI assistants, building automated pipelines, and deploying applications on cloud infrastructure. I am comfortable evaluating tools, making build-vs-buy decisions, and implementing solutions that deliver measurable time savings.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how I can help build the systems that let your team scale.

Thank you for your time.

Sincerely,

Md Shahanur Islam Shagor
