I am writing to apply for the Senior Data Scientist position at Pertemps ERP. The focus on building deep learning models for recommendation, ranking, and personalisation at scale aligns directly with my technical background and research interests.

Through research and development work, I have built production-ready AI systems that combine deep learning with real-world deployment. One example is WVAB (Wireless Vision-Aid for the Blind), where I designed and implemented a YOLOv8n-based object detection pipeline optimized for real-time inference on edge hardware. This required working with large datasets, tuning model performance, and ensuring the system operated reliably without cloud dependency.

In addition to deep learning, I have strong Python and SQL skills, which I have applied across multiple projects involving data processing, API integration, and backend development. I am comfortable designing experiments, evaluating model outputs, and iterating on approaches to improve accuracy and relevance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to your team’s work on large-scale deep learning systems.

Sincerely,

Md Shahanur Islam Shagor
