I am writing to apply for the SAP EWM Consultant position at Pertemps ERP. While my professional background is rooted in software engineering and full-stack development, I bring strong analytical skills, system customization experience, and a proven ability to master complex enterprise platforms quickly.

Through my work as a Web Developer, I have built and optimized large-scale applications using Laravel, Next.js, and Node.js. These projects required deep understanding of database architecture, role-based access control, API integration, and performance tuning. I am confident that this technical foundation, combined with my systematic approach to problem-solving, will allow me to contribute effectively to SAP EWM customization and implementation.

One area that particularly interests me is the challenge of adapting complex systems to meet specific business needs. In previous projects, I have customized authentication workflows, payment integrations, and real-time communication modules. I approach each system with a focus on understanding its core logic before making modifications, which has helped me deliver reliable and maintainable solutions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am based in Voronezh, Russia, and am prepared to relocate to the Ems-Land area for this position. I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
