I am writing to apply for the Tiefbauingenieur position at a2Plan Ingenieure GmbH. Although my formal education is in software engineering rather than civil engineering, I am drawn to this opportunity because of the clear emphasis on digital transformation and the structured team environment described in the posting. I am eager to contribute my technical skills to support your transition toward BIM and model-based planning.

Through my professional experience as a Web Developer, I have built a strong foundation in IT systems, including Linux server administration, Docker containerization, and CI/CD pipeline management. These skills are directly relevant to the digital tools and workflows that modern engineering offices rely on. I am comfortable working with complex software environments and learning new platforms quickly.

One area where I can add immediate value is in supporting your team's adoption of BIM and CAD-based workflows. I have experience integrating third-party APIs, managing databases, and automating repetitive tasks. I am confident I can quickly become proficient with BricsCAD or AutoCAD and help streamline your planning processes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am motivated to grow within a supportive team and take on increasing responsibility over time. I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to a2Plan Ingenieure GmbH.

Sincerely,

Md Shahanur Islam Shagor
