I am writing to apply for the Web Developer / Full-Stack Developer role at Bluefield Daily Telegraph. With 4 years of professional experience building and deploying web applications, I am confident I can contribute to your team's technical goals.

My core expertise lies in full-stack development using Laravel and Next.js. I have built scalable backend systems with Laravel, including RESTful APIs, authentication, role-based access control, and payment gateway integration. On the frontend, I work with Next.js, React, TypeScript, and Tailwind CSS to create responsive, SEO-friendly interfaces.

In my professional experience at Explo-IT, I delivered web applications end to end. I optimized database performance through Eloquent query tuning and caching, integrated real-time features using WebSockets, and deployed applications on Linux servers with Docker and Nginx. I also collaborated closely with stakeholders to translate requirements into working software.

One project that reflects my approach is a multivendor e-commerce ecosystem I built using Laravel and MySQL. The system manages customers, sellers, delivery agents, and logistics teams through role-based access control, with Firebase notifications and Google Maps integration for real-time tracking.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I welcome the opportunity to discuss how my background aligns with the needs of Bluefield Daily Telegraph.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
