I am writing to apply for the Data Scientist position at New Flyer. Your work in heavy-duty transit and sustainable mobility solutions is impressive, and I am interested in contributing to data-driven projects that support manufacturing, quality, and supply chain operations.

My technical background is centered on applied AI and machine learning. I have worked with Python for building and evaluating models, and I am comfortable with SQL for data exploration and analysis. Through hands-on project work, I have developed a solid understanding of machine learning workflows, feature engineering, and model performance evaluation.

One relevant example is the Wireless Vision-Aid for the Blind (WVAB) project, where I designed a real-time object detection system using YOLOv8n. This involved data preprocessing, model training, performance tuning, and deploying the model on edge hardware for offline inference. The project required working across the full AI pipeline, from data collection to production integration.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills can support New Flyer’s data science initiatives.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
