I am writing to apply for the Vice President of Operations role at Vestcom, a business of Avery Dennison. Your focus on technology-driven shelf-edge solutions for retailers and CPGs is impressive, and I am interested in contributing to the operational excellence that supports these data-integrated media systems.

My professional experience spans full-stack web development and product delivery, where I have been responsible for designing scalable applications, managing API integrations, and ensuring reliable deployments. I have worked closely with engineering teams and stakeholders to align technical execution with business objectives, which has given me a practical understanding of how operations, technology, and customer experience connect.

In previous work, I have built and maintained production systems using Laravel, Next.js, Node.js, and MySQL, with a focus on performance optimization, real-time features, and secure authentication. I have deployed applications on Linux servers using Docker, Nginx, and CI/CD pipelines, and I have experience managing cloud infrastructure on AWS. These responsibilities have required consistent planning, cross-team coordination, and a focus on delivering quality results on time.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in technology-driven operations and delivery can support Vestcom’s goals.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
