I am writing to apply for the Vice President of Operations position at Avery Dennison. Your company's work in materials science and digital identification solutions, particularly through the Vestcom business, is impressive. The focus on technology-driven shelf-edge solutions that connect physical and digital experiences aligns with my own interest in building systems that bridge real-world operations with software.

Through my professional experience as a Web Developer, I have delivered full-stack applications that required coordinating multiple stakeholders, managing delivery timelines, and maintaining quality across releases. I have worked on projects involving authentication systems, payment integrations, real-time features, and database optimization. These experiences have given me a practical understanding of how technical execution connects to broader business goals.

One area that particularly interests me is the emphasis on on-time delivery and year-to-year improvement of operations results. In my previous work, I have been responsible for deploying and maintaining applications on Linux servers, setting up CI/CD pipelines, and ensuring system reliability. I am comfortable working with cross-functional teams to align technical work with operational targets.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
