I am writing to apply for the Designer role on the Multiplatform Content Design team at Forbes. The opportunity to craft compelling, user-focused brand experiences at a globally recognized media brand is something I find genuinely motivating.

My design work is grounded in practical front-end development and a strong sense of visual hierarchy. I have experience using Figma to create layouts, wireframes, and UI components, and I bring a solid understanding of typography, color, and responsive design. I am comfortable working across the full design-to-development pipeline, ensuring that what is designed can be built efficiently and consistently.

In previous projects, I have built polished landing pages, interactive features, and platform-native interfaces using Next.js, Tailwind CSS, and Material UI. I have worked closely with content teams to translate editorial goals into clear visual concepts, balancing creative ambition with practical execution. I am also experienced in managing multiple concurrent projects and iterating based on feedback and performance data.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and portfolio for your review. I would welcome the chance to discuss how my design and development experience can contribute to the Forbes Content & Design Studio.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
