I am writing to apply for the Google Ads Specialist position at digitalbakery GmbH. Your focus on data-driven strategy and transparent performance for e-commerce shops is something I find genuinely compelling. The opportunity to work with a team that values measurable growth and continuous optimization aligns well with how I approach technical work.

My background is in full-stack and AI engineering, where I have spent years building systems that rely on data analysis, performance monitoring, and iterative improvement. I have developed real-time server health monitoring dashboards using React, Node.js, and Socket.IO, and deployed AI-powered applications on cloud infrastructure including AWS and Google Cloud. These experiences have trained me to think in terms of metrics, efficiency, and systematic optimization rather than just features.

One area that particularly interests me is the emphasis on testing new strategies and optimizing campaigns based on ROAS and conversion data. In my professional experience, I have built and maintained scalable web applications where I continuously tested API integrations, database queries, and frontend performance to improve user outcomes. I approach every project with a structured, data-informed mindset, prioritizing what drives the most impact.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical and technical skills can contribute to the continued success of digitalbakery GmbH.

Sincerely,

Md Shahanur Islam Shagor
