I am writing to apply for the Senior Software Engineer (PHP, TypeScript, Node.js) position at easybill GmbH. Your platform serves over 22,000 businesses with invoicing, process automation, and integrations, and I find the challenge of building reliable, scalable systems for that scale genuinely interesting.

My professional experience centers on full-stack development with PHP and TypeScript. Over the past four years, I have worked extensively with Laravel and Next.js, building backend features, RESTful APIs, and modern frontend interfaces. I am comfortable working across the stack and taking ownership of features from design through deployment.

In my previous role at Explo-IT, I developed and maintained web applications using Laravel on the backend and Next.js on the frontend. I built RESTful APIs, implemented authentication and role-based access control, and worked extensively with MySQL for query optimization and data modeling. I also deployed applications on Linux servers using Nginx and Docker, and integrated real-time features using WebSockets. This experience aligns well with your stack of PHP, TypeScript, React, Node.js, and MySQL.

One area that particularly interests me is your emphasis on using AI as a productivity tool in engineering workflows. I have integrated AI APIs into production systems before, including OpenAI and Replicate, and I am comfortable working with AI tools to accelerate development and debugging.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience could contribute to easybill’s engineering team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
