I am writing to apply for the Senior AI Engineer Architect role at Lemon.io. Your marketplace model connecting engineers with US and European startups is a compelling approach, and I appreciate the emphasis on matching developers with projects that fit their actual skills and preferences.

Through hands-on project development, I have built AI-powered applications that integrate large language models, computer vision, and automation into practical systems. My work includes developing an AI-powered financial app using OpenAI, Express, and MongoDB, where I implemented AI assistants trained on custom datasets, voice-to-text transcription via AWS Transcribe, and automated PDF generation. I also built an AI-powered real estate platform that uses the Replicate API for image processing and OpenAI for intelligent property analysis, with role-based authentication, subscription plans, and Stripe payment integration.

In addition to AI-specific work, I have strong software engineering fundamentals. I have designed and deployed full-stack applications using Laravel, Next.js, Node.js, and PostgreSQL, with experience in RESTful API design, authentication, real-time features via WebSockets, and production deployment on Linux servers with Docker and Nginx. This combination of AI engineering and full-stack development allows me to build complete, production-ready systems from the ground up.

I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience aligns with your current AI-related projects.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
