I am writing to apply for the Full Stack Developer role at Better Futures Multi Academy Trust. The opportunity to shape ARC and Swaya, two products that directly impact leadership development and student feedback, is exactly the kind of product ownership I look for in a role.

My professional experience centers on full-stack development with React, TypeScript, and Laravel, where I have built responsive interfaces and scalable backend systems. I have also worked with React Native and Flutter for mobile app development, which maps directly to managing the iOS and Android updates for Swaya. I am comfortable inheriting an existing codebase, improving it, and shipping meaningful updates.

In previous work, I have taken ownership of full application delivery from API design and database optimization to deployment and real-time feature integration. I have worked directly with stakeholders to define product direction and have consistently focused on solving real UX problems rather than just completing tickets. This product-minded approach aligns well with what you are looking for.

I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can contribute to ARC and Swaya.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
