I am writing to apply for the P0005148 position at æ•æØ å¢. With a strong foundation in full-stack development and AI engineering, I bring practical experience building scalable web applications and intelligent systems that solve real-world problems.

Through my professional work as a Web Developer, I have designed and developed full-stack applications using Laravel, Next.js, React, and Node.js. I have built RESTful APIs, implemented authentication and role-based access control, integrated payment gateways, and optimized database performance with MySQL and Redis. I also have experience deploying applications on Linux servers using Docker, Nginx, and CI/CD pipelines.

One project that reflects this capability is the Multivendor E-commerce Management Ecosystem, where I built a Laravel backend with role-based access control, Firebase notifications, and Google Maps API integration, paired with Flutter mobile apps for customers, sellers, and delivery agents. This project required coordinating multiple user roles, real-time updates, and scalable database design.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
