I am writing to express my interest in joining HomeExchange. As a full-stack and AI engineer with four years of professional web development experience, I build systems that are practical, scalable, and maintainable. I prefer working on platforms that solve real problems for real people, and HomeExchange's community-driven model aligns with that approach.

Through my professional experience, I have worked extensively with Laravel, Next.js, React, and Node.js to build full-stack applications. I design RESTful APIs, implement authentication and role-based access control, integrate payment gateways, and optimize database performance. I also work with MySQL, PostgreSQL, Docker, and Linux servers for reliable deployment and maintenance.

One project that reflects my approach is the multi-vendor e-commerce ecosystem I built using Laravel and Flutter. The system connects customers, sellers, and delivery agents through a unified backend with role-based access, real-time notifications, and secure API communication. It required careful architecture planning to ensure scalability across web and mobile platforms.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to HomeExchange. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
