I am writing to apply for the Werkstudent (gn) Controlling & Projekte position at OST BAU. The combination of operational business, financial administration, and IT-driven project work described in the role matches my interest in working where data, analysis, and technology meet practical business needs.

As a Software Engineering student with hands-on experience in data processing and reporting systems, I am comfortable working with structured data, preparing it for analysis, and building tools that make information useful for decision-making. I have developed full-stack applications that involve real-time data pipelines, dashboards, and API integrations, which have given me a solid foundation in handling data flows and supporting analytical workflows.

One area that particularly interests me is the preparation and transformation of data for intelligence systems. In previous projects, I have worked on systems that collect, process, and visualize data in real time, enabling teams to monitor performance and identify trends. I am eager to apply this experience to support your reporting and controlling processes, and to contribute to the digitalization of your business steering tools.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills and interests align with the needs of your team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
