I am writing to apply for the Senior Product Manager role at Develocity. Your work on the context-engineering layer for AI-driven software delivery is directly relevant to the problems I have been solving as a software engineer and AI practitioner.

Develocity sits at the intersection of developer tooling, build efficiency, and AI-powered intelligence. My experience building full-stack applications with Laravel, Next.js, and Node.js has given me a practical understanding of the SDLC and the challenges enterprise teams face with build and test workflows. I have worked with CI/CD pipelines, Docker, and Linux server deployments, which aligns with your focus on toolchain efficiency.

In my professional experience as a Web Developer, I designed and developed scalable web applications, built RESTful APIs, implemented authentication and role-based access control, and optimized database performance. I also delivered real-time features using WebSockets and deployed applications on Nginx and Apache servers. This hands-on engineering background allows me to understand both the technical constraints and the product opportunities in developer tooling.

One area that particularly interests me is AI integration. I have built AI-powered features including assistants using OpenAI's models, image processing with Replicate API, and automation pipelines. For example, in the AI Powered Financial App project, I developed APIs using Express, TypeScript, and OpenAI, integrated AWS SES for authentication, and built a system that converts voice messages to text using AWS Transcribe. This experience aligns with your need to establish product direction for AI agents and autonomous workflows.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to Develocity's mission.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
