I am writing to apply for the (Senior) Data & KI Architekt position at TEQYARD. Your focus on building intelligent solutions for industrial clients, from chatbots to powerful platforms, aligns directly with the kind of work I enjoy most: designing and implementing AI systems that solve real business problems.

Through research and development work, I have built AI-powered systems that go beyond simple prototypes. One area that particularly interests me is designing AI services and architectures that can be integrated into existing applications. In my project work, I developed an AI-powered financial application that used OpenAI models trained on custom datasets, integrated AWS services for authentication and document generation, and handled real-time voice processing. This required identifying business requirements, designing the AI architecture, and delivering a production-ready solution.

A relevant example is my work on an AI-powered real estate platform, where I integrated the Replicate API for image processing and trained multiple AI assistants using GPT models. The system included role-based authentication, subscription plans, and Stripe payment integration. This project gave me hands-on experience in developing prototypes, implementing AI into existing application flows, and continuously improving AI processes based on real usage.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience in AI architecture and software engineering can contribute to TEQYARD’s client projects.

Sincerely,

Md Shahanur Islam Shagor
