I am writing to apply for the VP Creative position at Kanahoma. Your mission to build a better agency for organizations building a better world, particularly in the education and nonprofit sectors, is compelling. The role's focus on integrating AI and emerging technology into creative strategy is where I see the strongest alignment with my background.

My professional experience has been in full-stack development and AI engineering, where I have built systems that combine technical architecture with user-facing products. I approach technology not as an end in itself, but as a tool to solve real problems and create meaningful experiences. This perspective is directly relevant to leading creative strategy in an agency environment where technology and creativity must work together.

A relevant example is the AI-powered financial platform I developed, where I integrated OpenAI assistants, AWS services, and real-time data processing to create an intelligent system that simplified complex financial workflows. This project required translating technical capabilities into a product that felt intuitive and useful, balancing innovation with practical execution.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI, technology, and product development can contribute to Kanahoma's creative vision.

Sincerely,

Md Shahanur Islam Shagor
