I am writing to apply for the Embedded Software Developer freelance position at Software Engineering Weber GmbH. Your focus on low-level programming, secure systems, and hardware-near development matches the kind of engineering work I seek and enjoy.

My technical foundation includes C++ and Python, with practical experience building systems that interact directly with hardware. I have worked on real-time object detection pipelines, sensor integration, and UDP-based streaming on embedded platforms such as Raspberry Pi and ESP32-CAM. These projects required careful memory management, timing control, and performance tuning on resource-constrained devices.

One area that particularly interests me is your emphasis on secure bootloaders and compliance with the Cyber Resilience Act. Through my research on secure UAV communication systems, I have worked with cryptographic primitives, authentication mechanisms, and tamper-resistant data handling. I am comfortable reading datasheets, writing drivers, and implementing low-level interfaces for PWM, ADC, and CAN-style communication.

In addition to embedded C++ work, I have experience building Python-based test automation pipelines. I have used PyTest for structured testing and have worked with Linux-based development environments, GitLab-style CI workflows, and Docker for reproducible builds. I approach code reviews and documentation with the same discipline I apply to system architecture.

I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I can be regularly present in Kempten for hardware-related work.

I have attached my CV and look forward to discussing how I can contribute to your projects as a long-term freelance partner.

Sincerely,

Md Shahanur Islam Shagor
