I am writing to express my interest in the Supply Chain Director role at Novaris Search. While my professional background is in software engineering and full-stack development, I bring a strong systems-thinking approach, experience building scalable platforms, and a track record of optimizing complex workflows through automation and data-driven decision-making.

Through my work as a Web Developer, I have designed and deployed production-grade applications using Laravel, Next.js, and Node.js, with a focus on performance, reliability, and cross-functional coordination. I have built RESTful APIs, implemented role-based access control, integrated payment gateways, and managed database optimization across MySQL and PostgreSQL environments. These projects required careful planning, inventory of technical resources, and continuous improvement of system processes.

One relevant example is the Real-Time Server Health Monitoring dashboard I developed. This system tracked the availability, latency, and performance of multiple target URLs simultaneously, streaming live metrics to the browser using Socket.IO. It involved coordinating between frontend and backend components, managing data flow, and ensuring reliable uptime through Dockerized deployment and Nginx configuration. The project required the same kind of cross-functional alignment, process improvement, and attention to operational efficiency that a supply chain leadership role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building and optimizing systems can contribute to strengthening the supply chain function at your client’s organization.

Sincerely,

Md Shahanur Islam Shagor
