I am writing to apply for the Pedagogy Specialist English position at CloudFactory. Your mission to combine advanced technology with human expertise to make data usable and inference reliable resonates with my own approach to building practical, real-world systems.

While my professional background is in software engineering, I have direct experience working with AI-assisted learning systems. I have developed AI-powered applications that process natural language, generate intelligent responses, and provide automated feedback. This experience gives me a practical understanding of how AI can support and enhance educational content evaluation.

What stands out to me about this role is the focus on reviewing trial lesson feedback, evaluating grammar exercises for pedagogical alignment, and using learner data to drive content improvement. These responsibilities require a combination of language proficiency, attention to detail, and the ability to connect individual lesson insights to broader learning outcomes. My work building systems that analyze user input and deliver context-aware responses has prepared me well for this type of structured evaluation work.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills and experience can contribute to CloudFactory’s mission of connecting people to meaningful work.

Sincerely,

Md Shahanur Islam Shagor
