I am writing to apply for the Junior Data Analyst role at Numa. Your approach to combining technology with hospitality to create seamless guest experiences is genuinely interesting, and I appreciate the emphasis on data-driven decision making across revenue, marketing, and strategy teams.

Through my professional experience as a Web Developer, I have worked extensively with SQL databases including MySQL and PostgreSQL, writing complex queries, optimizing performance, and ensuring data integrity across multiple systems. I have built dashboards and reporting interfaces that present real-time metrics to stakeholders, which directly connects to your need for developing self-service tools and generating commercial insights.

One area that particularly interests me is the opportunity to extract and analyze data from large-scale data warehouses. In previous projects, I have integrated data from various sources, identified trends and anomalies, and translated findings into actionable improvements. I am comfortable working autonomously in iterative environments and collaborating with cross-functional teams to answer key business questions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical skills and technical background can contribute to Numa’s data initiatives.
