I am writing to apply for the Senior AI Engineer role at Lemon.io. Your marketplace model connecting engineers with US and European startups is a practical approach to remote work, and I appreciate the emphasis on direct client communication and senior-level autonomy.

My work in AI engineering focuses on building practical systems that solve real problems. I have developed multiple applications where I integrated large language models and AI APIs into production environments. For example, I built an AI-powered financial application where I trained custom OpenAI assistants using domain-specific datasets and implemented voice-to-text processing through AWS Transcribe. I also developed an AI-based real estate platform that combines GPT-powered assistants with Replicate API for intelligent image processing, role-based access control, and subscription management.

Through these projects, I gained hands-on experience with OpenAI APIs, LLM integration, and building AI features that users interact with directly. I designed the backend architecture using Express and TypeScript, managed data with MongoDB, and deployed on AWS infrastructure. I am comfortable working with REST APIs, authentication flows, and cloud services to deliver complete AI-enabled features from concept to deployment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my AI engineering experience aligns with the projects at Lemon.io.

Sincerely,

Md Shahanur Islam Shagor
